Shield your network with

cutting-edge DNS security

Brava DNS Shield

Brava

Revolutionary DNS security for modern enterprises

Did you know that 88% of organisations faced at least one DNS-based attack last year? This is mainly due to the fact that over 1% of websites host malicious content, translating to approximately 18.5 million infected sites that employees might inadvertently access.`

Our proactive threat protection, powered by cutting-edge technology, ensures that your organisation can safely and securely use the internet on all connected devices. It also optimises your network's performance by using the fastest and most reliable DNS resolvers available. Brava DNS Shield is adaptable for small businesses and large enterprises, providing peace of mind and reliable protection without impacting the user experience.

Unmatched benefits for your business

Intelligent defense

Automatically block malicious domains and evolving threats with our our AI-driven detection system. Keep your network secure without manual intervention, ensuring comprehensive protection against the latest cyber threats.

Cost-effective security

Reduce IT overhead with this managed service. Eliminate the need for additional security staff and lower operational costs so you can direct your resources to other critical areas of your business.

Scalable protection

Scale your protection as your business grows, leveraging continuous DNS security across all devices and locations. Whether you're a small business or a large enterprise, Brava DNS Shield adapts to your needs, ensuring uninterrupted protection.

Core features for ultimate protection

- Real-time detection and blocking of malicious domains.
- Emphasis on user privacy and secure communication channels.
- Effortless deployment and management for IT teams.
- Comprehensive protection for all devices and locations.
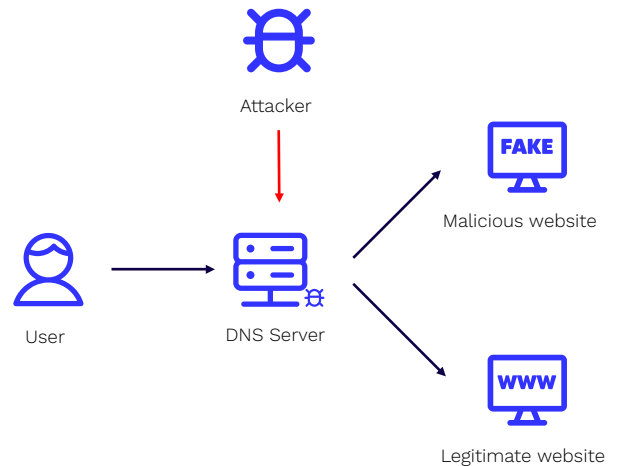

Complete DNS security for every need

Choosing the right content filtering solution for your business is a balancing act between current needs and future growth. Brava DNS Shield excels at this by protecting your employees from phishing and malware, regardless of where the threat originates.

Our machine learning algorithms evaluate unknown domains instantly, providing the most up-to-date threat and domain analysis in the industry. This safeguards your organisation against evolving cyber threats, allowing you to focus on what matters most—growing your business.

How it works

Every time you visit a website, send a chat message, download a file, or watch a video, your device makes a DNS request.

Seamlessly integrating into your existing infrastructure, Brava DNS Shield checks these requests against its filtering policy before any connection is established. This allows it to block malicious domains and ensure secure and efficient network performance, providing comprehensive protection against the DNS-based threats that threaten your organisation.
